

symphony API Manager

Where APIs Flow, Innovation Grows

SATURN SOFT

Transform your business with symphony API Manager – a cloud-native solution that boosts efficiency, security, and scalability. Built on an open-source, Agile foundation, it's designed for enterprises of all sizes to streamline API management effortlessly

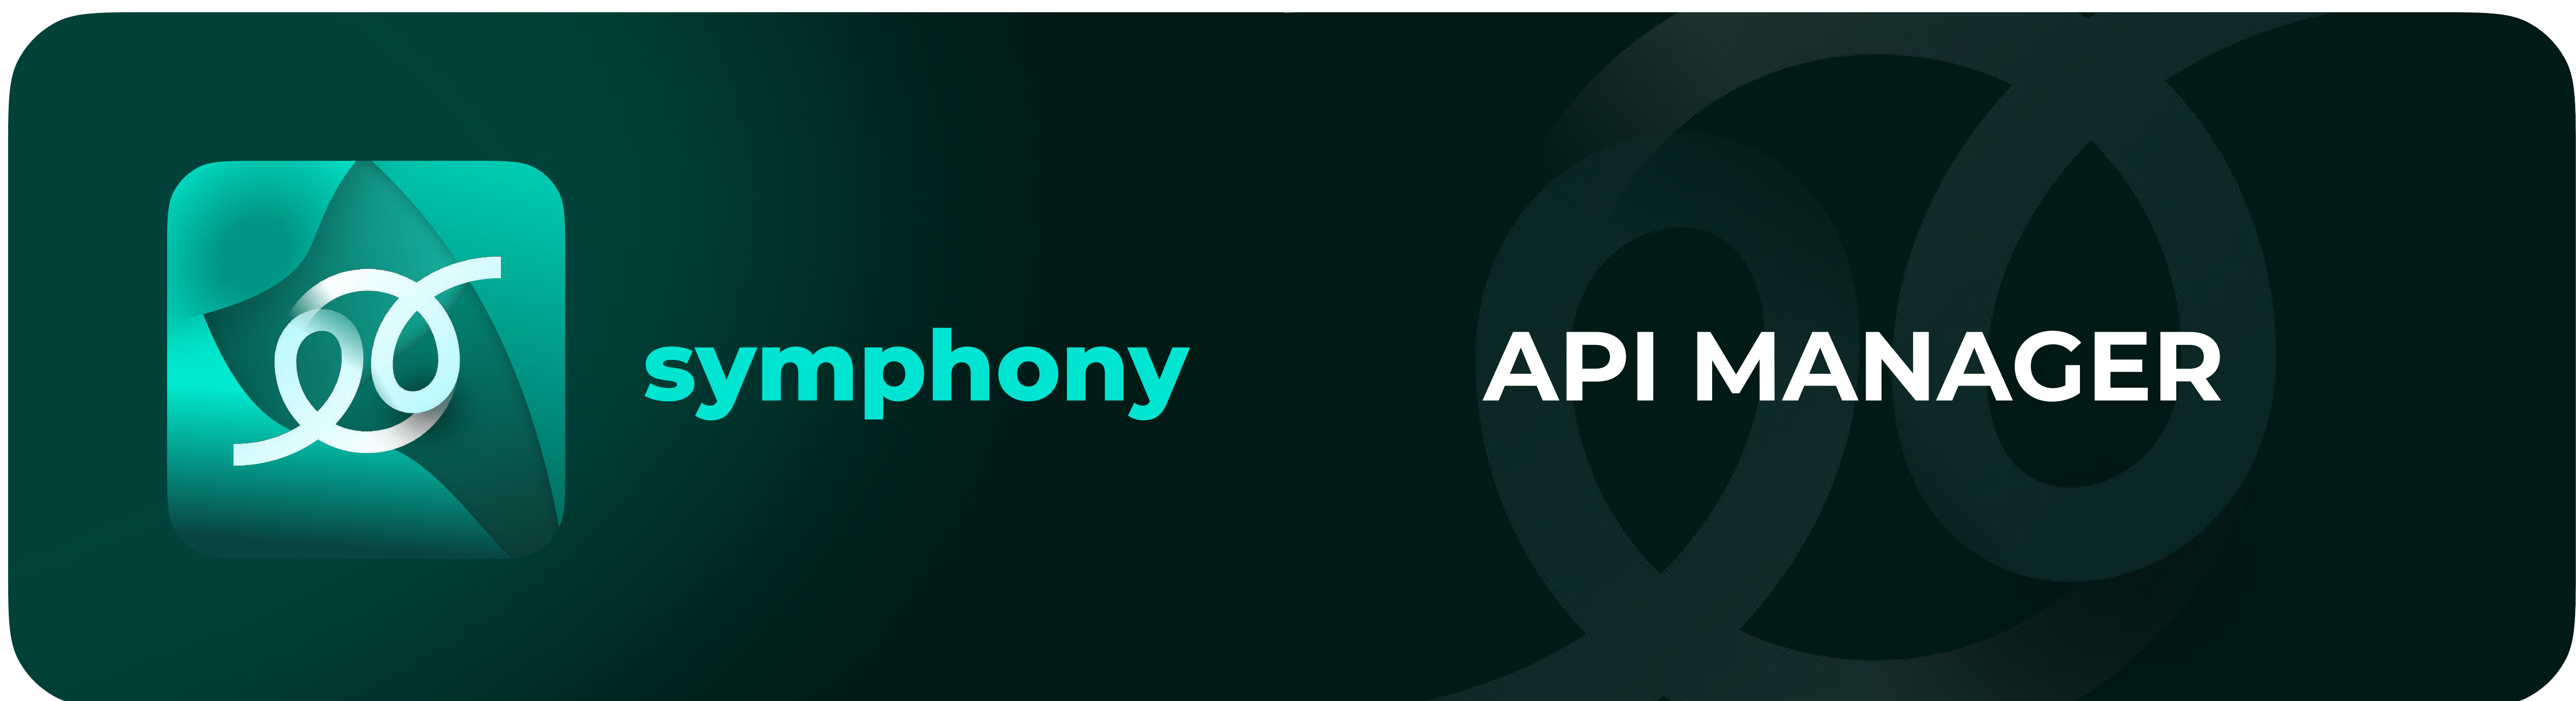

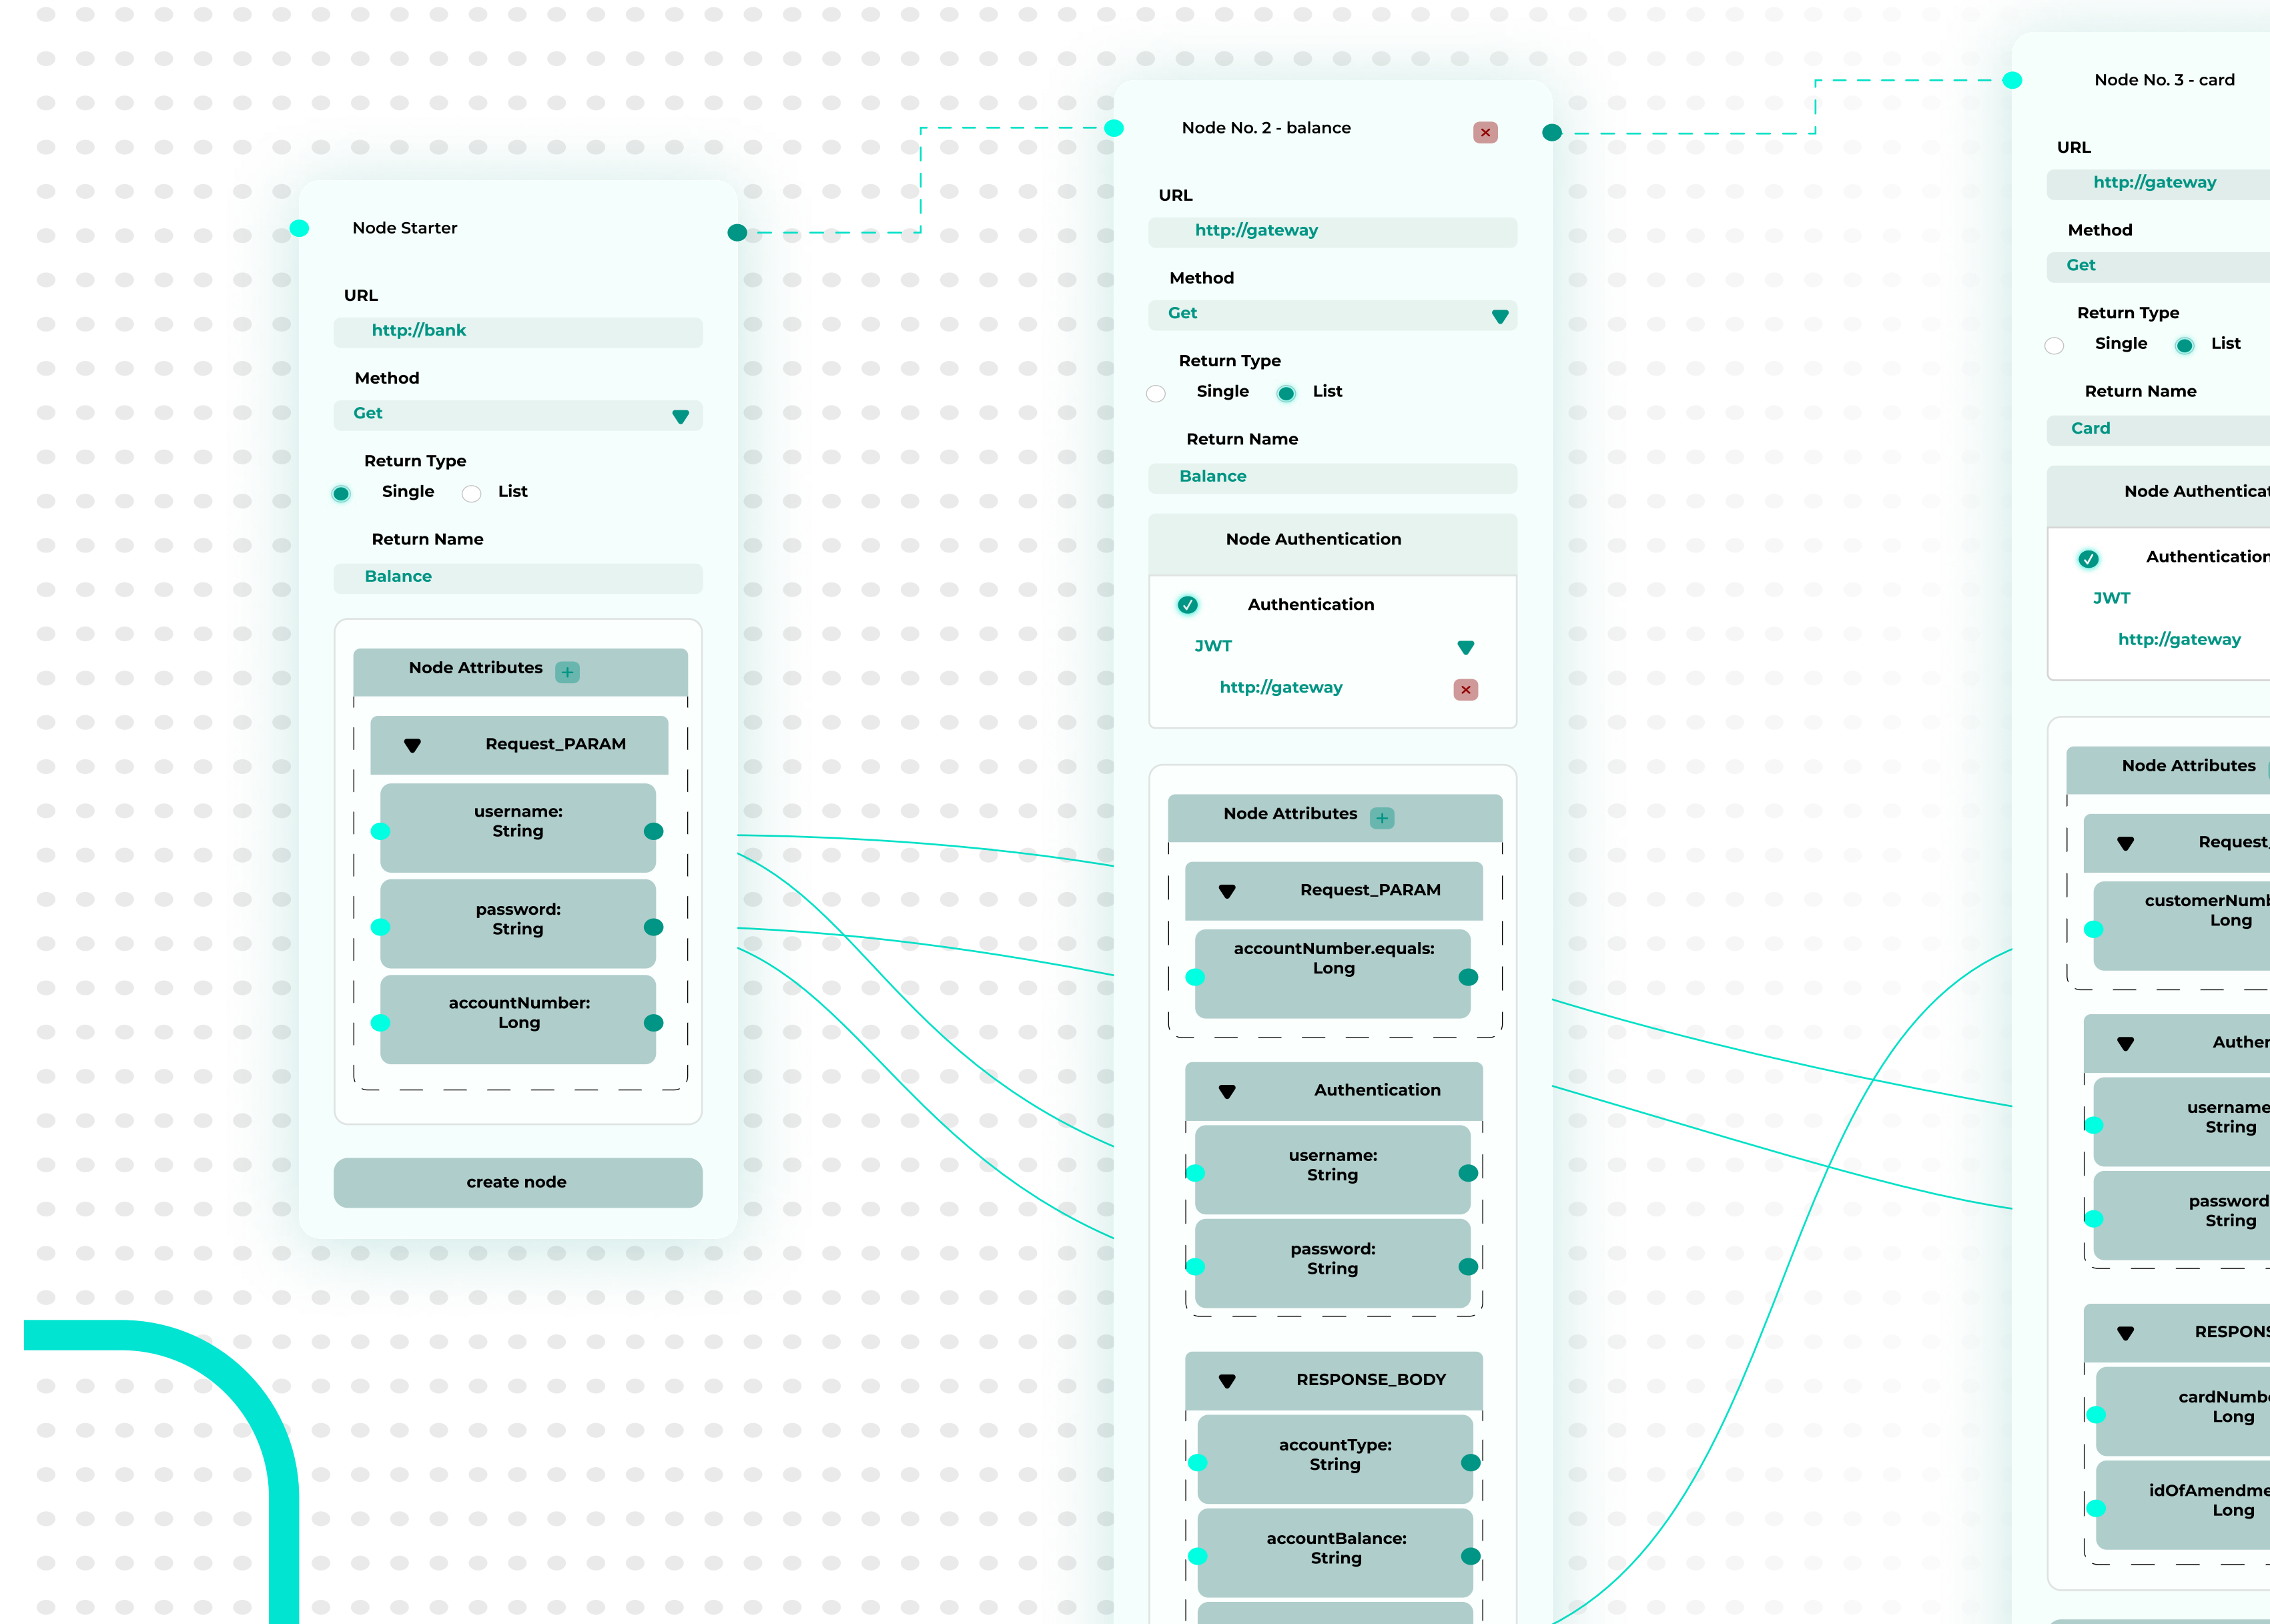

Key Features:

- ✦ **No-Code Simplicity:** Manage APIs and databases effortlessly with an intuitive, code-free platform.
- ✦ **Fast Deployment:** Automate publishing to speed up launches and enhance productivity.
- ✦ **Scalable Power:** Integrates seamlessly with Kubernetes, OpenShift, and Docker for easy scaling.
- ✦ **Top-Notch Security:** Protects integrations with robust, multi-layered safeguards.
- ✦ **Intuitive Interface:** Offers a user-friendly design built for peak performance.

Architecture

Symphony Tech Solutions brings advanced API management with a unified gateway for authentication, access control, and event logging. Built on an open-source, Agile foundation, it's designed for businesses of all sizes, from startups to global enterprises. This system simplifies API oversight with an intuitive, user-friendly approach, empowering your team to focus on growth

SOHA API Gateway:

- Serves as your first line of defense, managing all API requests with ease.
- Handles traffic, caching, and security checks for seamless performance.
- Supports Layer 7 routing and acts as a proxy or load balancer for TCP traffic.

Logging & Panel:

- Tracks every request, path, and event with detailed logs stored in DBs or files.
- Simplifies auditing and troubleshooting for your team.
- Integrates with ELK for deep, actionable insights.

Identity & Access Management (IAM):

- Secures access with Keycloak and SSO integration.
- Offers multi-factor authentication (MFA) like OTP and token methods.
- Provides Role-Based Access Control (RBAC) for precise URL and API permissions.

Proxy Module:

- Seamlessly publishes and converts services (e.g., REST to SOAP).
- Guarantees full protocol compatibility for smooth operations.

Flow Manager:

- Connects effortlessly with REST, File, Code Injector, Database, SOAP, and JMS/Queue.
- Enables no-code API creation from databases through a simple panel.
- Supports queries across PostgreSQL, MySQL™, Oracle™, and more

Accounting:

- Tracks request volumes, costs, and performance metrics in real-time.
- Integrates with billing systems for easy cost allocation and reporting.

Customized Dashboard:

- Delivers real-time analytics with role-based views.
- Powered by Prometheus and Grafana for deep insights.
